BOSSCODER ACADEMY

Data Engineering

CURRICULUM BROCHURE

Upskill & Ace in Your Data Career

About Bosscoder

Bosscoder Academy is an outcome-focused upskilling platform for tech professionals. Our industry-approved approach towards teaching helps our learners upskill & transition into their dream tech roles.

Learners enrolled with us are taught, guided, and mentored by engineers working at top product companies like Google, Microsoft, Amazon, Arcesium, etc.

Our Learners have witnessed an industry-leading hike of 120% with 6.25X ROI (Return on Investment).

About Bosscoder Data Engineering Program

Bosscoder Data Engineering is an industry-recognised program that focuses on:

1. Building the RIGHT skills with Real-life Business Case Studies.
2. Hands-on Projects with Datasets from Real Companies.
3. Revised in 2026 with up-to-date tools & cloud-incorporating projects.

Within our program, you will learn from live classes hosted by instructors working in Data Engineering roles with top product companies.

Landscape of Data

We live in a world powered by data. From the food we order to the music we stream, from banking to healthcare everything runs on it. But raw data alone is worthless. **It's Data Engineering that makes it usable, reliable, and scalable.**

- **Healthcare:** Petabytes of patient records flow daily. Data Engineers build secure pipelines so algorithms can predict diseases years ahead. The healthcare analytics market will grow from $41B in 2023 to $96B by 2030.
- **Finance:** Fraud detection relies on real-time ingestion of billions of transactions. Robust pipelines save banks billions, with AI-driven systems cutting fraud losses by 20–30% annually.
- **Agriculture:** IoT sensors and satellites feed data that helps farmers boost yields. Smart agriculture is set to hit $34B by 2027—all powered by scalable pipelines.

And this is just the beginning. **Data Engineering is the backbone of every industry's data revolution.**

No wonder LinkedIn ranks it among the fastest-growing roles for 3 years in a row. Average salaries? ₹12–18 LPA in India, $120K+ in the US. Data is the new oil, and **Data Engineers are the refiners.**

Why Transition into Data Engineering?

- **High Compensation** - Among the top-paying tech roles globally.
- **High Impact** - Systems you build fuel decisions in every sector.
- **Future-Proof** - With global data volumes doubling every 2 years, demand is only rising.

The challenges -

Stepping into Data Engineering can feel overwhelming. There are 100+ tools in the ecosystem Spark, Kafka, Airflow, Snowflake, Databricks, Hadoop, and the list never ends.

- Which tools actually matters?
- What should you master first SQL, Python, or Big Data frameworks?
- How deep should you go into each tool?
- What's must-have knowledge vs. nice-to-know?

Without the right guidance, learners bounce between random tutorials, never gaining clarity, confidence, or knowing what truly matters for jobs.

The Bosscoder Edge

Curriculum is Built by **data engineers from top product companies,** our program is designed to remove all the confusion and give you a clear, step-by-step roadmap.

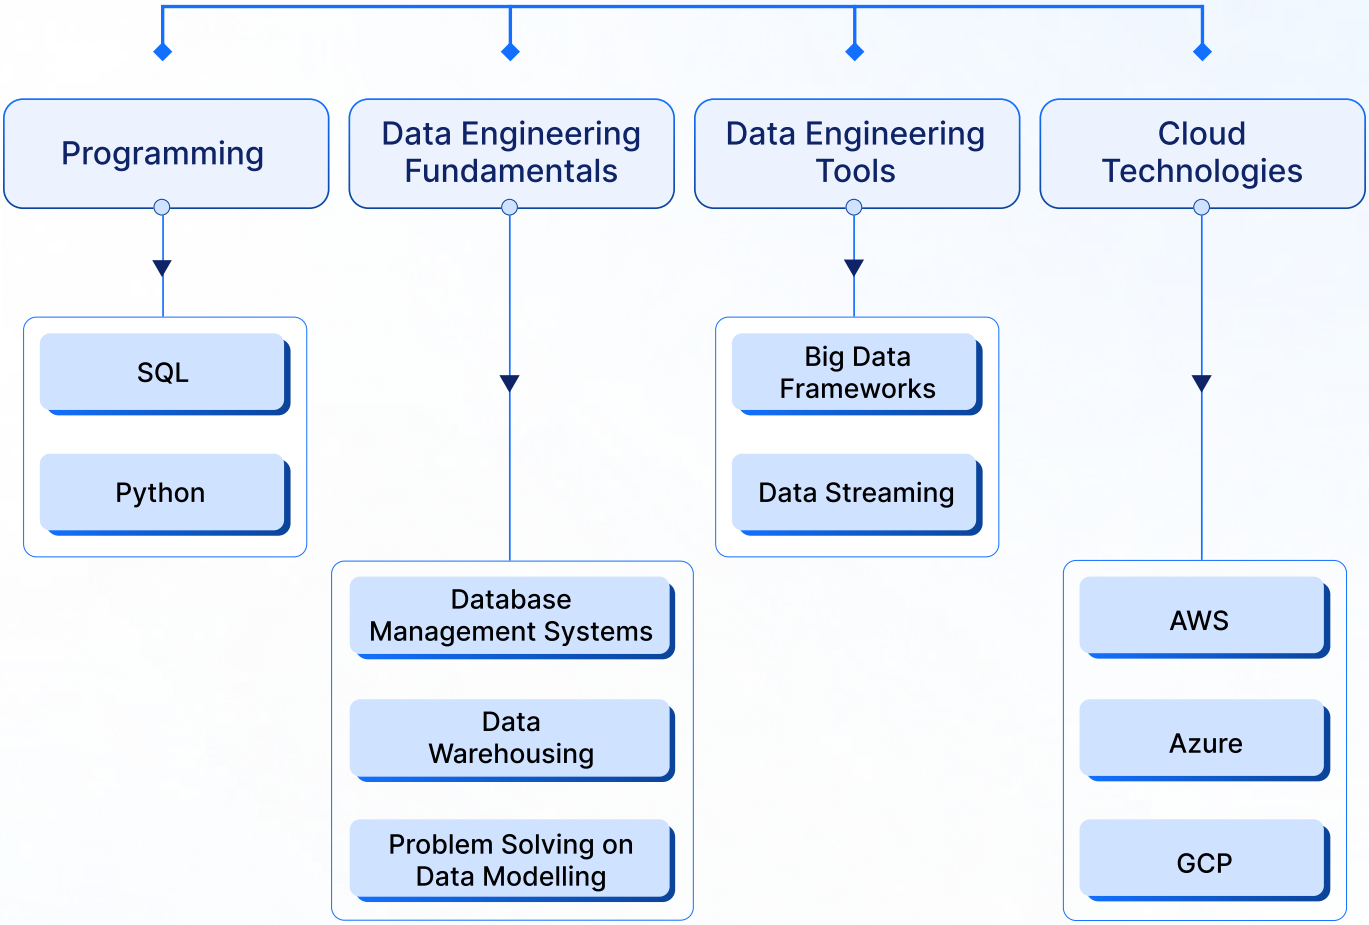

- **Live interactive classes** with experts from Google, Amazon, Flipkart & more.
- **Structured curriculum** that tells you exactly what to study, when to study, and how deep to go so there's no guesswork.
- **1:1 mentorship** with senior engineers to guide your progress.
- **Capstone projects & assignments** with industry datasets to build end-to-end pipelines.
- **Mock interviews & placement support** with referrals to top data roles.
- **24/7 doubt support + peer community** so you're never learning alone

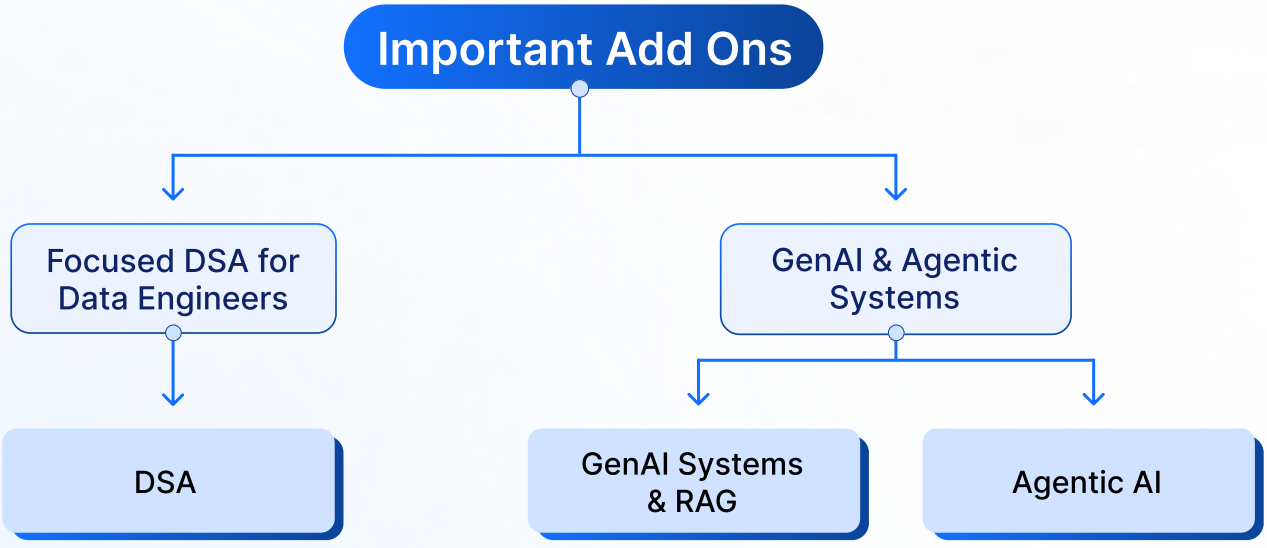

Why upskill with us?

Enhance Your Career With These Enriching Aspects of Bosscoder's Upskilling Program.

- Structured, Industry-vetted Curriculum
- Live Classes with Industry Experts
- Hyper-Personalized Learning
- Regular 1:1 Mentorship
- 1.5K+ Bosscoder Learners & Alumni Network
- Industry Relevant Projects & Real World Case Studies
- A Dedicated Recruitment Cell

DATA ENGINEERING CURRICULUM

Let's explore all the modules in detail, one by one.

Bosscoder Curriculum

Topics	Total Duration

Module 1: Programming

SQL	8 weeks
Python	

Module 2: Data Engineering Fundamentals

Database Management Systems	5 weeks
Data Warehousing	
Problem Solving on Data Modelling	

Module 3: Data Engineering Tools

Big Data Frameworks	5 weeks
Data Streaming	

Module 4: Cloud Technologies

AWS	4 weeks
Azure	
GCP	

Module 5: Focused DSA for Data Engineers

DSA	8 weeks

Module 6: GenAI & Agentic Systems

GenAI Systems & RAG	4 weeks
Agentic AI	

Programming

MODULE - 1 **Duration: 8 Weeks**

Strong basics are non-negotiable. That's why we start with programming fundamentals - SQL, Python.

Python will help you write clean code, solve problems, and handle complex datasets with ease.

SQL, on the other hand, is the key to extracting and managing data from real-world databases.

Together, they'll give you the confidence to engineer scalable data pipelines and tackle the challenges of modern data systems head-on.

Topics Covered:

1. SQL

- Intro to SQL and Advance Select
- Joins
- Sorting and Grouping
- Aggregation
- CTEs
- Subqueries
- Advance string functions, regex/clause
- Windowing Functions
- Recursive CTE

2. Python

- Python Refresher
- Functional Programming
- Modules, Errors and Exceptions
- OOPS
- NumPy
- Pandas + Data Visualisation
- Project: Navigating the Stock Market with Python

★ USPs of our Delivery

- All topics taught in live classes with limited batch size helping in instant doubt support to accelerate learning.
- Assignment (post-lecture) & their evaluation.
- Hyper-Personalised: Special focus on the individual with a constant touch from student success manager & mentor.

P G Gowtham Kumar

accenture → AMERICAN EXPRESS

I joined Bosscoder for structured guidance to prepare for interviews. The live sessions were interactive and mentorship was extremely helpful. Regular doubt-support and mock interviews boosted my preparation. With their guidance, I gained clarity and confidence, which helped me secure multiple offers and make a successful switch.

Prince Yadav

rtds → amazon

I struggled to find a structured way to upskill until I joined Bosscoder. The live sessions were detailed and the mentorship was highly impactful. Consistent learning, mock interviews, and personal guidance helped me grow in clarity and confidence. Bosscoder proved to be the right platform for my career transition.

Data Engineering Fundamentals

MODULE - 2 **Duration: 5 Weeks**

Now that your basics are clear, it's time to move into Data Engineering Fundamentals. This module is all about three core areas: data management systems, data warehousing, and data modeling.

- In **Data Management Systems**, you'll understand how relational and NoSQL databases actually work covering indexing, clustering, sharding, and the difference between OLTP and OLAP.
- In **Data Warehousing**, you'll see how large-scale data is stored, organized, and optimized for analysis, while also getting hands-on with tools like DBT and Airflow.
- In **Data Modeling**, you'll practice designing schemas and solving real-world problems across domains like banking, e-commerce, and healthcare.

By the end, you'll know how to design, manage, and scale data systems- the core of being a data engineer.

Topics Covered:

1. Database Management Systems

- Database - Introduction
- Types of Database - RDBMS, NoSQL, Columnar, Graph (With real-world use cases)
- ACID Properties
- Database Architecture

- ER Modelling
- Normalization & Denormalization

2. Data Warehousing

- OLTP vs OLAP
- Data Warehousing Architecture
- Facts Vs Dimensions
- Star and Snowflake Schema
- ELT Tools
  → *SCDs - Type 1, 2, 3*
  → *Introduction to popular Tools - DBT, Airflow*
- Indexing and Clustering
- Sharding & Query Optimisation
- Data Management Strategies

3. Problem Solving on Data Modelling

→ Banking System
→ Cab Booking System
→ E-commerce Platform
→ Netflix
→ Learning Management System like Bosscoder
→ Health Care System like Fortis

★ USPs of our Delivery

- Hyper-personalization: Depending on student-specific learning pace, multiple revision classes are organized.
- Assignments (post-lecture) & their immediate evaluation help to compare your performance against peers.
- The focus is not just to remember maths formulas but to help learners visualize the intuition behind concepts, enabling them to identify patterns.
- As you work on different business situation & product thinking, you gain a deeper understanding on what insights are important & what insights are not important for a particular scenario.

Ritesh Chikatwar

IBM → mastercard

I joined Bosscoder when I was struggling to switch roles after years of experience. The structured curriculum and interactive sessions helped me build clarity. One-on-one mentorship and consistent feedback kept me on track. Placement support also improved my professional profile. I'm thankful to Bosscoder for this smooth transition.

Revanth Kasula

argano → PERSISTENT VENTURES

Bosscoder aligned perfectly with my plans to upskill. The live sessions were interactive and doubt support was prompt. Personalized mentorship gave me clarity on challenges and solutions. Placement guidance with resume and LinkedIn optimization added huge value. Overall, it was a complete package for career growth.

Data Engineering Tools

MODULE - 3 **Duration: 5 Weeks**

You've already built your basics in programming and data engineering fundamentals. Now it's time to use and learn the actual tools that data engineers work with daily.

First, you'll learn **ETL and Integration Tools** like DBT, Airflow, and Fivetran these help you move data and shape it the way you need.

Next, you'll get into **Big Data Platforms** like Snowflake, BigQuery, Databricks, and Hadoop; the same systems companies rely on to manage data at massive scale.

By the end, you'll know how to build, orchestrate, and manage pipelines that are ready for real-world performance.

Topics Covered:

1. ETL - Data Integration Tools

- DBT
- Apache Airflow
- Fivetran

2. Big Data Fundamentals

- Snowflake
- Google Bigquery
- Databricks
- Hadoop distributed file system

★ USPs of our Delivery

- Hands-on Learning Experience.
- Learn maths from a case-study approach & Fall in love with Mathematics.
- Solve multiple real-life case study problems in live classes & understand the tradeoffs of each algorithm.

Gaini Alfred Richards

EA → phenom

I joined Bosscoder to upskill and switch to better opportunities. The flexibility of recorded lectures and strong doubt support made learning easy despite my busy schedule. Even before completing my course, the structured guidance helped me transition successfully. Bosscoder continues to support my growth journey.

Ajay Naik

ansrsource → amazon

My experience with Bosscoder was life-changing. The program gave me valuable mentorship, resume optimization, and structured assignments. The teaching was excellent, and the supportive team boosted my confidence. It turned out to be a great investment for career growth.

Cloud Technologies

MODULE - 4 **Duration: 4 Weeks**

Almost every big product company runs their data on the cloud and now you'll learn how to do it too.

You'll work with the three important platforms: **AWS**, **GCP**, and **Azure**. Step by step, you'll see how data is stored, processed, and secured using services like Amazon S3, RDS, Glue, Google BigQuery, Dataflow, and Azure Synapse.

By the end, you'll be prepared to design and manage scalable, secure, and efficient cloud-based data solutions across multiple environments.

Topics Covered:

1. AWS

- Intro to Cloud
- Amazon S3
- Amazon RDS/Aurora
- AWS Glue
- AWS Data Migration Services
- Elastic Compute Cloud(EC2)
- EC2 + Load Balancer
- EC2 + Auto scaling
- AWS Lambda

- IAM (Identification and access management)
- KMS (key management service)
- AWS Cloudwatch
- AWS Cloudtrail

2. GCP

- GCP - Bigquery
- Google Cloud Storage
- Dataflow
- Dataproc

3. Azure

- Azure Synapse Analytics
- Azure Data Lake Storage
- Azure Data Factory
- Azure Databricks

★ USPs of our Delivery

- Impactful projects like Real-Time Financial Data Processing for Goldman Sachs, Fraud Detection Data Pipeline for PayPal and multiple others.
- 1:1 discussion with your mentor regarding project improvements.

Focused DSA for Data Engineers

MODULE - 5 **Duration: 8 Weeks**

Every product company asks DSA in interviews the only difference is the difficulty level, which changes with the role. In this module, we'll cover exactly the amount of DSA you need to crack **Data Engineering Interviews at Top Product Companies**. Nothing extra, only what matters.

Topics Covered:

1. DSA

- Time Complexity and Space Complexity
- Arrays
- Maths
- BIT Manipulation
- Strings
- Binary Search
- Recursion
- Backtracking
- Sorting
- 2 Pointers
- Hashing

- Stacks and Queues
- Linked Lists
- Binary Trees
- DP
- Graphs

★ Why You'll Love This Module

- Master DSA and system design for data platforms.
- Tackle real-world scalability and system challenges.
- Build high-performing, reliable data systems.

Prince Yadav

rtds → amazon

I struggled to find a structured way to upskill until I joined Bosscoder. The live sessions were detailed and the mentorship was highly impactful. Consistent learning, mock interviews, and personal guidance helped me grow in clarity and confidence. Bosscoder proved to be the right platform for my career transition.

Gogireddy Meghanath

NOT WORKING → ORACLE

I found Bosscoder while searching for a way to upskill and it exceeded expectations. The sessions broke down concepts in a clear and engaging way. Regular tests and mentorship sessions kept me consistent and motivated. The guidance I received played a vital role in helping me achieve my career goals.

GenAI & Agentic Systems

MODULE - 6 **Duration: 4 Weeks**

Generative AI is rapidly transforming how modern data systems are built and operated. As data engineers, it's no longer enough to just move and process data, you need to understand how intelligent systems interact with data. In this module, we explore GenAI & agentic systems that automate workflows and enable smarter data-driven decision-making.

Topics Covered:

1. Foundations of Generative AI

- LLM basics (APIs, tokens, context, cost)
- Prompt engineering for real-world use cases
- Structured outputs (JSON, function calling)

2. Retrieval & Data Systems for GenAI

- Embeddings and vector databases
- Chunking and indexing strategies
- RAG Systems

3. Agentic Systems

- Introduction to agent-based systems
- Tool usage and task automation
- Designing simple AI agents for workflows

Get Placed as Data Engineer at Top Companies

Now that you've upskilled, it's time to land your dream job at a top product-based company.

We Make It Happen in 3 Steps:

1. Profile Building

- Resume that stands out
- LinkedIn optimization
- Curated job profiles
- Guidance on applying (including cold emails that work)

2. Referrals

- Strong alumni network
- Mentors and instructors supporting your journey
- Sharing hiring requirement of different companies.

3. Company Tie-ups

- 200+ hiring partnerships across top tech companies

The Final Result

Secure your dream role at a top tech company with the hike you deserve - and we'll be right there celebrating your success.

And yes, this process continues until you get placed.

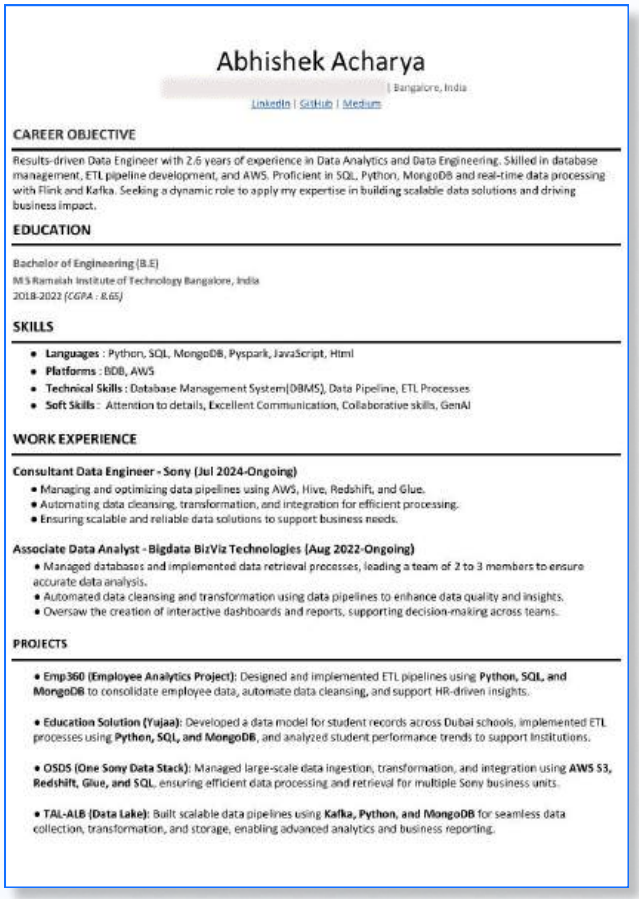

Placement Plus

How we help you in 3 steps

1. Profile Building

Resume Building

CAREER OBJECTIVE

Results-driven Data Engineer with 2.6 years of experience in Data Analytics and Data Engineering. Skilled in database management, ETL pipeline development, and AWS. Proficient in SQL, Python, MongoDB and real-time data processing with Flink and Kafka. Seeking a dynamic role to apply my expertise in building scalable data solutions and driving business impact.

EDUCATION

Bachelor of Engineering (B.E)
M S Ramaiah Institute of Technology Bangalore, India
2018-2022 *(CGPA : 8.65)*

SKILLS

- **Languages** : Python, SQL, MongoDB, Pyspark, JavaScript, Html
- **Platforms** : BDB, AWS
- **Technical Skills** : Database Management System(DBMS), Data Pipeline, ETL Processes
- **Soft Skills** : Attention to details, Excellent Communication, Collaborative skills, GenAI

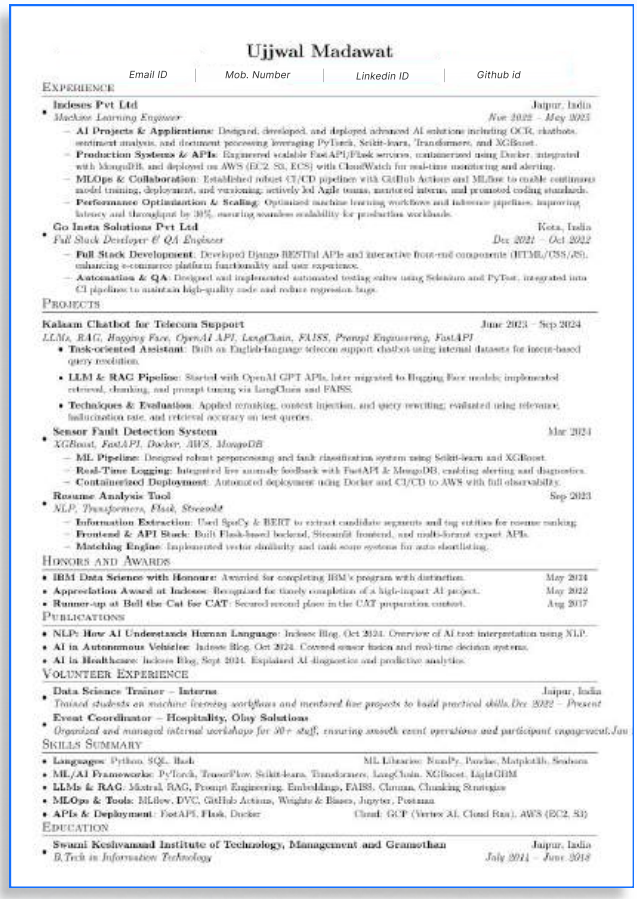

WORK EXPERIENCE

Consultant Data Engineer - Sony (Jul 2024-Ongoing)
- Managing and optimizing data pipelines using AWS, Hive, Redshift, and Glue.
- Automating data cleansing, transformation, and integration for efficient processing.
- Ensuring scalable and reliable data solutions to support business needs.

Associate Data Analyst - Bigdata BizViz Technologies (Aug 2022-Ongoing)
- Managed databases and implemented data retrieval processes, leading a team of 2 to 3 members to ensure accurate data analysis.
- Automated data cleansing and transformation using data pipelines to enhance data quality and insights.
- Oversaw the creation of interactive dashboards and reports, supporting decision-making across teams.

PROJECTS

- **Emp360 (Employee Analytics Project):** Designed and implemented ETL pipelines using **Python, SQL, and MongoDB** to consolidate employee data, automate data cleansing, and support HR-driven insights.
- **Education Solution (Yujaa):** Developed a data model for student records across Dubai schools, implemented ETL processes using **Python, SQL, and MongoDB**, and analyzed student performance trends to support institutions.
- **OSDS (One Sony Data Stack):** Managed large-scale data ingestion, transformation, and integration using **AWS S3, Redshift, Glue, and SQL**, ensuring efficient data processing and retrieval for multiple Sony business units.
- **TAL-ALB (Data Lake):** Built scalable data pipelines using **Kafka, Python, and MongoDB** for seamless data collection, transformation, and storage, enabling advanced analytics and business reporting.

Ujjwal Madawat

Email ID | Mob. Number | Linkedin ID | Github id

EXPERIENCE

- **Indexes Pvt Ltd** — Jaipur, India
  Machine Learning Engineer — *Nov 2025 – May 2025*
  - **AI Projects & Applications:** Designed, developed, and deployed advanced AI solutions including OCR, chatbots, sentiment analysis, and document processing leveraging PyTorch, Scikit-learn, Transformers, and XGBoost.
  - **Production Systems & APIs:** Engineered scalable FastAPI/Flask services, containerized using Docker, integrated with MongoDB, and deployed on AWS (EC2, S3, ECS) with CloudWatch for real-time monitoring and alerting.
  - **MLOps & Collaboration:** Established robust CI/CD pipelines with GitHub Actions and MLflow to enable continuous model training, deployment, and versioning; actively led Agile teams, mentored interns, and promoted coding standards.
  - **Performance Optimization & Scaling:** Optimized machine learning workflows and inference pipelines, improving latency and throughput by 30%, ensuring seamless scalability for production workloads.
- **Go Insta Solutions Pvt Ltd** — Kota, India
  Full Stack Developer & QA Engineer — *Dec 2021 – Oct 2022*
  - **Full Stack Development**: Developed Django RESTful APIs and interactive front-end components (HTML/CSS/JS), enhancing e-commerce platform functionality and user experience.
  - **Automation & QA**: Designed and implemented automated testing suites using Selenium and PyTest, integrated into CI pipelines to maintain high-quality code and reduce regression bugs.

PROJECTS

- **Kalaam Chatbot for Telecom Support** — June 2023 – Sep 2024
  LLMs, RAG, Hugging Face, OpenAI API, LangChain, FAISS, Prompt Engineering, FastAPI
  - **Task-oriented Assistant**: Built an English-language telecom support chatbot using internal datasets for intent-based query resolution.
  - **LLM & RAG Pipeline**: Started with OpenAI GPT APIs, later migrated to Hugging Face models; implemented retrieval, chunking, and prompt tuning via LangChain and FAISS.
  - **Techniques & Evaluation**: Applied reranking, context injection, and query rewriting; evaluated using relevance, hallucination rate, and retrieval accuracy on test queries.
- **Sensor Fault Detection System** — Mar 2024
  XGBoost, FastAPI, Docker, AWS, MongoDB
  - **ML Pipeline**: Designed robust preprocessing and fault classification system using Scikit-learn and XGBoost.
  - **Real-Time Logging**: Integrated live anomaly feedback with FastAPI & MongoDB, enabling alerting and diagnostics.
  - **Containerized Deployment**: Automated deployment using Docker and CI/CD to AWS with full observability.
- **Resume Analysis Tool** — Sep 2023
  NLP, Transformers, Flask, Streamlit
  - **Information Extraction**: Used SpaCy & BERT to extract candidate segments and tag entities for resume ranking.
  - **Frontend & API Stack**: Built Flask-based backend, Streamlit frontend, and multi-format export APIs.
  - **Matching Engine**: Implemented vector similarity and rank score systems for auto-shortlisting.

HONORS AND AWARDS

- **IBM Data Science with Honours:** Awarded for completing IBM's program with distinction. — May 2024
- **Appreciation Award at Indexes:** Recognized for timely completion of a high-impact AI project. — May 2022
- **Runner-up at Bell the Cat for CAT:** Secured second place in the CAT preparation contest. — Aug 2017

PUBLICATIONS

- **NLP: How AI Understands Human Language:** Indexes Blog, Oct 2024. Overview of AI text interpretation using NLP.
- **AI in Autonomous Vehicles:** Indexes Blog, Oct 2024. Covered sensor fusion and real-time decision systems.
- **AI in Healthcare:** Indexes Blog, Sept 2024. Explained AI diagnostics and predictive analytics.

VOLUNTEER EXPERIENCE

- **Data Science Trainer – Interns** — Jaipur, India
  Trained students on machine learning workflows and mentored live projects to build practical skills. *Dec 2022 – Present*
- **Event Coordinator – Hospitality, Olay Solutions**
  Organized and managed internal workshops for 50+ staff, ensuring smooth event operations and participant engagement. *Jan*

SKILLS SUMMARY

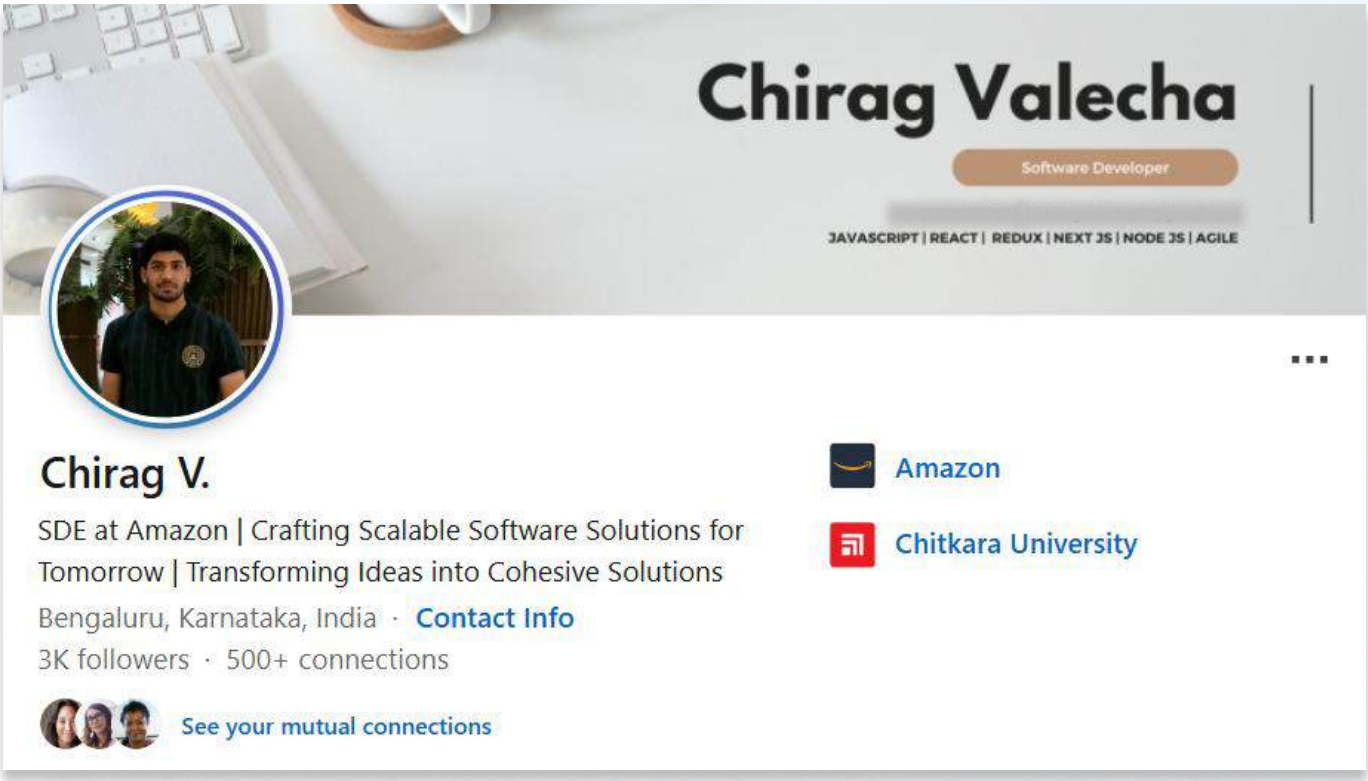

- **Languages:** Python, SQL, Bash — ML Libraries: NumPy, Pandas, Matplotlib, Seaborn
- **ML/AI Frameworks:** PyTorch, TensorFlow, Scikit-learn, Transformers, LangChain, XGBoost, LightGBM
- **LLMs & RAG:** Mistral, RAG, Prompt Engineering, Embeddings, FAISS, Chroma, Chunking Strategies
- **MLOps & Tools:** MLflow, DVC, GitHub Actions, Weights & Biases, Jupyter, Postman
- **APIs & Deployment:** FastAPI, Flask, Docker — Cloud: GCP (Vertex AI, Cloud Run), AWS (EC2, S3)

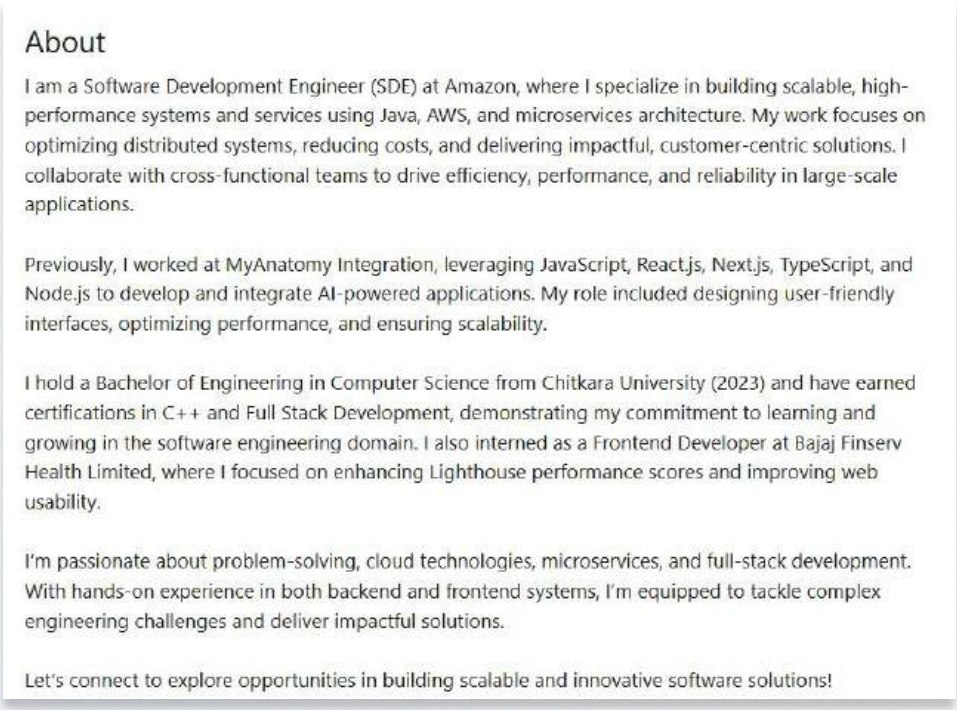

EDUCATION

- **Swami Keshvanand Institute of Technology, Management and Gramothan** — Jaipur, India
  B.Tech in Information Technology — *July 2021 – June 2025*

Your final resume will be **ATS-friendly**, packed with the right **keywords**, and formatted to **stand out** in recruiter shortlists.

LinkedIn Optimization

A strong LinkedIn profile makes you **discoverable in recruiter searches** and builds **instant credibility** with a clear headline, impact-based summary, featured work, and validated skills.

Guidance on Applying (incl. cold emails)

We'll teach you how to apply on your own from writing high-response cold emails **(subject → hook → proof → fit → call-to-action)** to smart follow-ups and using a simple tracker to stay organized.

2. Referrals

Strong Alumni Network

Our placed alumni at leading companies give **direct referrals**. You can interact with them, learn from their paths, and tap into a supportive **community**.

Mentors & Instructors

Get **on-demand mock interviews**, pinpointed feedback on what's going wrong, and a clear **improvement plan,** what to fix, how to practice, and when you're ready.

3. Tie-ups

Company Tie-ups

We have **200+ hiring partnerships** with product companies and fast-growing startups. How this helps you: we **circulate your profile** for matching roles, **fast-track screenings**, host exclusive drives, and keep re-routing you to new openings on repeat until you land an offer.

Projects

#1

Tesla Vehicle Telemetry ETL Pipeline

You'll work with raw telemetry data from Tesla's connected cars, staging it in Amazon S3 and orchestrating automated extraction, transformation, and loading with Apache Airflow. The processed data will be stored in Snowflake, enabling real-time vehicle performance monitoring, predictive maintenance, and fleet analytics just like in real-world automotive data systems.

Apache Airflow · snowflake · amazon S3

8 hours

#2

Airbnb Booking Data Transformation with DBT

Designed a transformation pipeline to manage Airbnb's booking and customer datasets. Implemented modular SQL models in DBT to clean, aggregate, and model data for reporting on occupancy rates, seasonal demand, and host performance. Snowflake served as the central warehouse, enabling scalable analytics for business teams.

snowflake · dbt

6 hours

#3

NETFLIX

Netflix Real-Time Streaming Analytics

You'll process high-velocity event streams like video plays, searches, and recommendations using Apache Kafka for ingestion and Apache Spark Streaming for transformations. The processed insights will feed into real-time dashboards, helping track trending shows and personalized content delivery just like Netflix does at scale.

Apache kafka Apache Spark

6 hours

#4

Spotify

Spotify Scalable Music Analytics on BigQuery

Leveraged Google BigQuery to analyze large-scale music streaming datasets. Performed SQL-based analytics to identify top songs, listening trends, and user engagement across regions. The project demonstrated Spotify's use of serverless warehousing for fast, scalable insights into customer behavior and recommendation systems.

Google Big Query SQL

5 hours

#5

Uber

Uber Ride Data Batch Processing with Hadoop

In this project, you'll work with Uber's ride log data stored in HDFS and process it with MapReduce to extract key insights such as peak demand hours, driver utilization, and geographic ride patterns. You'll understand how batch processing pipelines handle massive amounts of trip data efficiently — just like Uber does to optimize its operations at scale.

6 hours

#6

Goldman Sachs

Goldman Sachs Stock Market Data Analysis in Python

Built a Python-based data pipeline to analyze historical and real-time stock market data from public APIs. Cleaned and transformed datasets using Pandas, then applied exploratory data analysis to identify trading patterns and portfolio risks. Visualizations with Matplotlib and Plotly supported financial analysts in decision-making.

5 hours

#7

Amazon Prime Customer Churn Prediction

Develope a supervised ML model to predict customer churn in Amazon's Prime subscription service. Preprocessed customer transaction and engagement data, applied Logistic Regression and Decision Trees for churn classification, and evaluated results using accuracy and confusion matrix. Predictions were integrated into reporting pipelines to improve customer retention strategies

pandas learn SQL

8 hours

#8

Walmart Sales Analytics Dashboard with SQL

Created a relational database to store Walmart's point-of-sale data, including customer, product, and transaction records. Designed SQL queries to analyze monthly revenue trends, top-selling products, and customer segments. Used advanced joins and window functions to prepare datasets for business intelligence dashboards.

SQL MySQL

Meet Your Instructors & Mentors

LEARN FROM INDUSTRY VETERANS

Our instructors and mentors are highly rated by working professionals upskilling with us, they are working at top product companies & have experience working on industry scale Data Engineering projects. They are also familiar with the best ways to crack these companies.

Simran Bindra

Exp: **4+ yrs.**

Data Engineer II at Google

Simran is a Data Engineer with strong experience at Google and Cisco. She specializes in building scalable data pipelines, managing workflows, and optimizing systems using Snowflake, Apache Airflow, SQL, and Cloud tools. With hands-on expertise in ETL and automation, she has delivered high-impact data solutions that power business decisions.

Mudita Sharma

Exp: **4+ yrs.**

Data Engineer at Fractal / Ex. Infosys

Mudita is a certified Data Engineer with experience at Fractal and Infosys. She has expertise in end-to-end data pipelines, data processing, and cloud technologies, backed by 5 Microsoft Azure certifications. She has delivered scalable solutions in finance and analytics domains and excels at turning raw data into impactful business outcomes.

Kalyan Reddy Kandula

Exp: **5+ yrs.**

Data Engineer II at Philips / Ex. EY, Azira

Kalyan is an experienced Data Engineer with expertise in data pipelines, ETL workflows, and large-scale systems. Skilled in Python, SQL, PySpark, AWS, Azure, Databricks, Hadoop, Kafka, and Airflow, he has delivered scalable data architectures across finance, healthcare, and analytics domains. He focuses on automation, reliability, and efficiency to build impactful data solutions.

Gaurav Sinha

Data Engineer at Mastercard

Gaurav is a Data Engineer with 5 years of experience in designing and optimizing data solutions. He specializes in building scalable pipelines, automating ETL workflows, and managing data platforms using SQL, Python, Hadoop, PySpark, and Cloud Data Services. With expertise in Data Warehousing, MongoDB, Data Modeling, and Azure, he delivers high-impact data solutions that drive business insights.

Manish Garg

Co-founder of Bosscoder / Ex - Samsung, Quoori

Presenting Manish Garg, an IIT Dhanbad alumnus, has had an impressive tech career. From Samsung's Machine Learning engineer to collaborating with Android's founder at Essential and leading Quoori's speech department, his journey is remarkable. With nine years of teaching experience, Manish is dedicated to education and mentorship.

Ashish Prasad

Exp: **10 yrs**

Senior Software Engineer at Microsoft

Ashish is a seasoned Senior Microsoft Software Engineer with almost a decade of expertise in designing enterprise-level software. Proficient in object-oriented programming, he excels in the entire software development life cycle, from analyzing user requirements to deploying and maintaining diverse projects across multiple business domains.

Sanket Patel

Data Scientist at Amazon

Introducing Sanket Patel, a proficient Data Scientist at Amazon with four years of industry experience. Sanket's expertise encompasses building end-to-end machine learning project pipelines, including regression and classification modeling, clustering, forecasting, and computer vision. His hands-on approach and comprehensive knowledge in these areas make him an invaluable resource for learners aiming to master practical aspects of machine learning.

Rajat Garg

Co-founder - Bosscoder / Ex - Microsoft

Introducing Rajat Garg, an esteemed graduate of NIT Delhi from the class of 2019. Rajat embarked on his professional journey at Microsoft, playing a pivotal role in expanding PowerPoint's web services, catering to an impressive 200 million monthly active users. With a solid foundation of six years in teaching, Rajat is dedicated to education and mentorship.

Bosscoder Alumni's Thoughts

Kunal Das

Deloitte. → KPMG

I had been working as a Consultant in the Data Engineering domain for four years. I enrolled into the Data Engineering program to get consistent with solving questions and get deep knowledge about market standards. Instructors taking the classes are good, they make sure the concepts are explained in an easy manner. My mentor Jagdeshwar helped me, with understanding how I can transition to a better company and which companies I should target. I was able to crack 5 offers due to the knowledge gained through the live sessions and constant revision of the concepts. I finally chose KPMG and have started working as a Consultant in the Data Engineer domain. If you are looking to transition to a better company, I recommend joining Bosscoder.

Akshay Darade

Fresher → NTT DATA

Through youtube I came to know about Bosscoder Academy. I had a detailed discussion with a counsellor after that I took admission in their Data Science program. I was literally very serious about the placements, I used to discuss placements with their team and maintain above 95% attendance. Solving questions on a daily basis with the help of mentors. Mentorship sessions are exceptionally well. I used to get to know about my level of understanding through mentor sessions.I took two mock interviews, one for python and another for SQL. Which landed me a Data Scientist role with a double digit annual salary. A good program with the right set of questions,good mentors and great placement support.

Joy Dasgupta

Deloitte. → epam

Bosscoder's course helped me stay consistent and go deep into concepts. The curriculum is up to industry standards, teachers are excellent, and the platform is 5/5. The practice and exams directly helped me in cracking interviews and securing multiple offers with great hikes.

Mansi Bansal

Honeywell → pwc

I came across Bosscoder and enrolled as the curriculum looked industry-relevant. The sessions were engaging, and instructors made sure every doubt was cleared. Mentorship gave me guidance on targeting better roles and preparing effectively. Within a few months, I was able to transition into a better role with a good hike. I feel much more confident now, thanks to Bosscoder.

Manik Gandhi

GameTheta → QuickReply.ai

I wanted to switch to a better company and needed a platform that could guide me. At Bosscoder, the structured curriculum and impactful sessions helped me improve my problem-solving skills. The mentorship and mock interviews gave me the confidence to face interviews. With consistent practice and guidance, I was able to crack a new opportunity.

Akash Tyagi

EY → amazon

I had been stuck in the same role for years and wanted to move forward. Bosscoder's structured program, live sessions, and mentorship gave me exactly the push I needed. The placement support with resume and profile feedback boosted my chances. With focused preparation, I was able to transition smoothly to a much better role.

Saahil Hussain Mugloo

adidas → Flipkart

I was looking for a structured path to upskill and get a decent hike. Bosscoder's sessions were insightful and engaging, making tough concepts easier to handle. I also received personal mentorship and one-on-one guidance. The placement team helped me refine my resume and LinkedIn, which proved very useful in landing a new role.

Sourabh

PLURALSIGHT → azuga

I chose Bosscoder after comparing many platforms, and it turned out to be the right decision for my data career. The program gave me a clear roadmap, hands-on projects, and strong placement support. With my mentor's guidance, I gained confidence, cleared 2 offers, and joined Azuga in a better role.

Soham Bhattacharyya

tcs → accenture

I was a production executive with little exposure to data technologies and wanted to switch domains. Bosscoder's structured curriculum and mentorship helped me build strong foundations and gain clarity. With the right guidance and resources, I confidently started my journey in the data field

Pranshika

APURBO → amazon

After joining Bosscoder, my approach to problem-solving completely changed. Clear explanations and structured learning gave me the confidence to apply concepts in practice. My mentor's guidance helped me handle interviews, and I was able to clear multiple rounds at Amazon. Even today, the notes and resources from the program continue to support my growth.

Garima Gogia

tcs → airtel

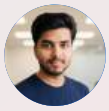

Earlier, I struggled finding the right topics to study, and I did not have any path to follow. What stood out for me at Bosscoder was the detailed curriculum, covering all topics. It went from basics to advanced topics.

Gogireddy Meghanath

NOT WORKING → ORACLE

I found Bosscoder while searching for a way to upskill and it exceeded expectations. The sessions broke down concepts in a clear and engaging way. Regular tests and mentorship sessions kept me consistent and motivated. The guidance I received played a vital role in helping me achieve my career goals.

Shyamalrao Chinnarao Uppu

electronica mechatronic systems → MOTWANE SECURITY SYSTEMS

I had basic knowledge of Python and SQL, but wanted deeper practical exposure to grow in the data domain. Bosscoder's structured program and live sessions gave me clarity and confidence. The mentorship helped me navigate interviews, and with consistent effort I was able to transition into a better role.

Padmanabh Manikandan

AlgoAnalytics → MAXHOME

I worked in the data field at a startup for 2.5 years but wanted to upskill for better opportunities. Bosscoder's structured curriculum helped me strengthen my foundations and apply concepts in real projects. Mentorship and assignments kept me consistent and built my confidence. With this support, I transitioned into a product-based company in the data domain.
